

## RAPID REMEDIATION.

Petroleum extraction, transportation and refining come with the inherent risk of soil contamination. HydroChemPSC offers a cost-effective solution for the fast and safe removal, remediation and disposal of such hazardous materials. Our rapid remediation processes are so thorough, "it's as if the event never occurred!"

## REMEDiation EXPERTS.

Our full roster of trained, experienced remediation personnel will ensure your project moves ahead quickly, thoroughly and safely. Multiple options for remediation and reclamation are available to our clients. Our team can handle your site remediation project utilizing conventional "dig and haul" heavy equipment and containers. We can surgically remove contaminants from buried utilities and/ or in-service piping with specialized equipment such as hydro excavation. We will evaluate the site to address these options prior to commencing work activities.

In addition to conventional "dig and haul" and surgical removal of pollutants from the site, we can provide in-situ treatment for the contaminants using our proprietary line of chemicals. With this chemistry we can treat H<sub>2</sub>S, hydrocarbons and other contaminants in-place without affecting the surrounding property. Our staff of application specialists can quickly provide recommendations through sample analysis.

### EQUIPMENT AVAILABLE

Our full roster of trained, experienced remediation personnel will ensure your project moves ahead quickly, thoroughly and safely. Our team can also handle your site remediation project utilizing conventional "dig and haul" heavy equipment and containers.

- Bulldozers
- Dump Trucks
- End Dumps
- Hydro Excavators
- Roll-off Containers
- Dump, Roll-off, & Service Trucks
- Sludge Boxes
- Trackhoes
- Air Movers
- Air Knives

## FULL RANGE OF REMEDIATION SERVICES.

HydroChemPSC commonly handles contaminants such as Naturally Occurring Radioactive Materials (NORM), petroleum hydrocarbons, chlorides, hydrogen sulfide, acids, alkalis and heavy metals. At HydroChemPSC, you'll find the experience, expertise and resources to manage your remediation project from start to finish.

### REMEDIATION SERVICES

- Consultation with State Regulatory Compliance Agencies
- Underground Utility Surveys
- Soil Removal, Transportation and Disposal
- Site Restoration
- In-situ Remediation

## SAFETY IS PRIORITY ONE.

HydroChemPSC incorporates stringent safety protocols on every remediation project. Its Loss Prevention System (LPS) safety system identifies and institutes corrective actions before an incident can occur. This translates into safe, productive projects for both the client and HydroChemPSC, minimizing downtime and ensuring your core operations can continue without interruption.

## OILFIELD SERVICES GROUP.

HydroChemPSC's oilfield services group offers a comprehensive range of services to onshore and offshore oil and gas production and drilling facilities, as well as other industries. Strategically located along the Gulf Coast, east and west Texas, and California, our oilfield services teams are able to respond to the needs of both major producers and independent operators within the continental United States, in offshore waters, and Alaska.
